

Method Statement for the Cleaning of Sand Cement Mortar or Concrete on KS1000RW

This method statement is for the on site cleaning of the sand cement mortar or concrete residue left on the panel surface.

Procedure

Sand Cement Mortar or Concrete

1. Carefully remove any large deposits from the surface, taking care not to scratch the coating to the panel.
2. For smaller deposits and any residue from large deposits, use a soft brush to apply a solution of water with 10% hydrochloric acid, do not rub the solution into the effected area, allow the solution to effervesce for up to a maximum time of a minute.
3. Rinse with clean water.
4. Repeat application and rinse procedures, if required.
5. Using a clean soft brush, wash the whole panel with a solution of 10% household detergent in water.
6. Rinse with clean water.
